

# Global Payroll

90% of businesses who enquire about our global payroll service, have implemented or are implementing a cloud based Human Capital Management system. All of them are looking for help with the following:

- How do you provide an employee experience that is consistent and compatible with that provided by your cloud based human capital management and finance systems;
- How do you automate and integrate your global payroll operation with the cloud based human capital management and finance systems, to reduce the need for manual intervention and to make the end to end payroll process as efficient as possible;
- How do you introduce standard processes and controls to manage and minimise their compliance risk.
- How do you retain the flexibility you need to support change and growth.

We can help you transform your end to end payroll operations and to generate savings of up to 30% by introducing standardised processes and controls, real time reporting, automating manual procedures, integrating with human capital management, finance, benefits and banking platforms, and providing a consistent experience for your payroll teams and employees.

## Why PwC?

Access to experienced and qualified payroll professionals operating in 150 countries around the world.
