

# Cyber attackers don't sleep.

## Do you stay up to catch up?

Based on our observations from incident response cases and other cyber engagements worked on by PwC firms across the network, the message to organisations is clear: **no entity is immune to cyber attacks.**

The cyber threat landscape today reflects a gaping trust deficit. An attack can infect your IT system in seconds – and you have as little as 15 minutes to act before it's too late.

The actions you take in those 15 minutes will help to preserve the trust you've spent years building with your customers, suppliers, employees, or anyone who matters to your organisation.

In an increasingly connected world, foundational building blocks of security measures need to expand beyond firewalls, antivirus softwares and disaster recovery to proactively monitor and hunt threats, and respond to attacks swiftly.

The options for safeguarding your digital assets are wide-ranging. However, organisations we spoke to share 3 common challenges:

Setting up and maintaining an internal security operations centre (SOC) that runs 24/7 requires **significant investments** in personnel, infrastructure and technology

Traditional managed security services (MSS) that **focus on perimeter security** and monitor individual technologies and application systems may not be effective in today's digital-enabled world

Cloud-based or off-the-shelf **solutions are not customised** to the organisation or the industry it is in

Introducing our  
Cyber Threat Operations:

## Dark Lab VIETNAM

Designed and built with the support of the founding team in Hong Kong with regional and global intelligence, PwC's Dark Lab Vietnam is set up to help organisations mitigate the most sophisticated cyber attacks – **bringing you global insights, with local execution.**

# Why PwC's Dark Lab Vietnam?

## Powered by Red Team.

It takes a hacker to know one. Our team of certified white hat hackers "red teamers" are trained to think like attackers, allowing them to **proactively identify and exploit vulnerabilities** in your systems before attackers get there.

## In-depth defence. Solution focused.

Our goal is to deliver solutions that protect your whole organisation beyond your IT perimeter, unrestricted by the number of devices, Data volume and your existing infrastructure – **all within a predictable pricing model.**

## Global threat intelligence. Regional regulatory support. Local expertise.

Agility and speed of response are key to stopping the spread of infection. Our local team uses their intimate knowledge of the latest attack techniques of 110+ distinct threat actors from around 20 countries to develop detection and response strategies that work for your organisation, in line with the Vietnam regulatory requirements.

PwC is a CREST-accredited firm to provide a range of security and threat operations services in this region

Our Cyber Threat Operations services span the full lifecycle, from prevention to response.

### Prevention

- Vulnerability Assessment and Penetration Testing
- Red Teaming Exercise
- Blue Teaming and Purple Teaming Exercise
- Phishing Campaign
- Source Code Review
- Security Configuration Testing and Review
- Cloud Security

### Intelligence

- PwC Global Threat Intelligence (GTI) Subscription
- Brand Protection Services
- Deep and Dark Web Monitoring

### Managed Security Services (MSS)

- Managed Surveillance Services (24/7 security monitoring)
- Managed Endpoint Detection and Response (MDR)
- Managed Defence (Security Solution-as-a-Service)
- Managed DevSecOps

### Incident Response

- Cyber Forensic and Digital Investigations
- Incident Response and Crisis Management
- Compromise Assessment
- Threat Hunting
